Dear Iulia, and all,

Thanks for your message - feedback is always welcome, and I appreciate you taking the time to let us know about your concerns.

Finding an exam formulation that is fair with respect to the content covered and the time available was a key concern for us when designing the exam.

We think that the exam itself is fair and doable, although I realize that you all don't see it that way for those 3 questions - we will have to agree to disagree.

In any case, rest assured that in grading we will be attentive to detect questions that may have been difficult to many, and to take that in consideration.

Kind regards,
Jorge (also on behalf of Dilek)
